Plan Hold®

**PLAN FILING SYSTEMS
ORGANIZE YOUR
DRAWINGS AND PLANS**

Now you can forget about hit-or-miss plan filing methods. A Plan Hold System keeps every plan and drawing within easy reach; gives you a clean, orderly, uncluttered filing system that will more than pay for itself in time and space savings.

Plan Hold equipment is mobile or stationary; installs anywhere; expands your system as your needs require, in minimum space.

Plan Hold's patented Friction Binder shown above is the key to efficient vertical plan filing. When the wing knobs are loosened, the spring-operated clamp opens and accepts up to an average 100 sheets' thickness. When tightened, it even secures a single sheet. No punching of holes or damage to the sheets in any way. Handles drawings of virtually any width. Comes in sizes from 18" to 42" in 6" increments.

Whether you work with single sheets or bulky sets of plans in office, drafting room, plant or field there is a Plan Hold system to suit your need and purpose.

**Plan Hold®
WALL RACKS**

Plan Hold Wall Rack File Folders can be mounted out of the way in separate offices or combined into large capacity systems for either active files or storage. The steel wall rack mount comes 12" wide with a capacity up to 600 sheets and 24" wide with a 1200-sheet capacity. Sheets stay clean, flat, free of wrinkles and dust, ready to use or reproduce. Each sheet can be inserted or removed from a Plan Hold Binder in seconds. Each binder provides for fast identification of drawings filed.

As photographed in the Los Angeles office of
Welton Becket and Associates, Architects and Engineers.

Plan Hold® MOBILE RACKS

When plans are used by two or more persons or by more than one department, this Plan Hold Rolling Stand File speeds use. Gliding on ball bearing casters, the file can be quickly moved to wherever it is needed. Height is adjustable to accommodate sheets up to 52" long; with extension it will file sheets 64" long.

Double Rolling Stand File has capacity for 2400 sheets up to 24" x 36".

BEFORE. Just try finding the plan you want in this messy, space-consuming system.

AFTER. This is the same office with plans and specifications filed for fast use in a neat Plan Hold Filing System.

Plan Hold® CABINET FILES

If you need lock and key security, Plan Hold offers a line of steel cabinets finished in attractive grey baked enamel. Here, for example, is the popular Combo Cabinet. Note how it can be integrated with standard drawer files. The cabinet measures 52" high and 15½" wide and holds up to 1200 sheets. A larger filing cabinet is available with 2000-sheet capacity.

Plan Hold also offers a "Spacesaver" Cabinet only 26½" deep, fitted with swing-out rack. Door handles on all cabinets are fitted with cylinder locks.

Plan Hold® TUBE FILES FOR ROLLED DRAWINGS AND PLANS

Modular Round Tube Files come in 2 $\frac{5}{8}$ " and 4 $\frac{7}{8}$ " diameters.

Modular Square Tube Files come in 2 $\frac{1}{8}$ ", 3 $\frac{3}{8}$ " and 4 $\frac{1}{2}$ " squares

If You Roll Your Drawings These Square Tubes Are the Greatest!

Rolled drawings slide in and out of Plan Hold's square tubes easier. No binding against the sides, as in round tubes. Each Plan Hold cabinet has 36, 16 or 9 square tube sections (as shown above). Tube lengths range from 25 $\frac{3}{8}$ " to 43 $\frac{3}{8}$ ". You can use cabinets singly or stack them as needed. Square tube files take little space on desk or table; also can be used alongside a desk in vertical position.

DISTRIBUTED BY

Plan Hold Stack Roll Files come in modular lengths up to 6 feet long. They are designed to stack from floor to ceiling. Stacks clip together to form a single rigid file. More than 25,000 individual drawings are filed in this vault at Autonetics, a division of North American Aviation, Inc.

If you will fill in the information through point 6 we will recommend the PLAN HOLD equipment which will prove most efficient for your requirements. Merely return this form to us. There is no obligation.
